TYMAR RESOURCES INC. (TMZ-V,T)

AKIKO-LORI GOLD RESOURCES LTD. (AKI-V)

VARITECH RESOURCES LTD. (VAR-V)

DRILLING RESUMED - Murray Pezim, chairman, reports Tymar Resources Inc, and equal joint venture partners Akiko-Lori Gold Resources Ltd. and Varitech Resources Ltd. have resumed diamond drilling on the Lakewater property located in the Eskay Creek area about 50 miles northwest of Stewart, B.C. and five km southwest of the Prime/Stikine discovery.

Assay results have been received for two samples of mineralized mudstone float recently collected from the North SIB claim gap of the Lakewater property. The Tymar samples are located proximal to the northeastern strike extension of the mineralized mudstone unit encountered in the Silver Butte/American Fibre drill hole 30 which returned 0.421 oz.gold/ton and 30.912 oz.silver/ton over 46.9 feet. Field descriptions for the Tymar samples compare favourably with the core observed in hole 30, in that appreciable visible stibnite and low percentages of base metal sulphides were noted. The average results from Tymar's two samples including re-checks were:

SAMPLE NO.	GOLD OZ/T	SILVER OZ/TON	ANTIMONY %	The location
38927	0.068	18.35	5.85	' of the sample sites
38928	.110	5.93	3.15	' are coincident with

' an induced polarization conductor and a geochemical gold anomaly. This target will be drilled during the current program. Tymar and its partners expect to complete the current \$500,000 drilling program by mid-December. (SEE GCNL No.217, 8Nov90, P.3 FOR PREVIOUS INFORMATION)
