LECTUS DEVELOPMENTS LTD. (LDV-V)

GREAT WESTERN STAR RESULTS - Stanley Ford, president, reports Lectus Developments Ltd. has received a summary report from operator **PACIFIC SENTINEL GOLD CORP.** (PSG-V) on exploration of the Great Western Star project near Nelson, B.C. Lectus can earn a 50% interest in the property and **REYMONI GOLD MINES LTD.** (RMT-Alberta) can acquire the remaining 50%. Pacific Sentinel can earn a 70% interest in the Lectus/Reymont agreements. Final assays from the winter drilling of 26 holes on the Alma North and Eureka areas have been plotted with the results indicating a zone of low grade copper/gold. Additional drilling is required to establish economic reserves.

Pacific Sentinel also carried out prospecting this past summer on the remainder of the property which uncovered a new showing of massive sulphide mineralization

in a road cut on the Toughnut claims. A 30-cm chip sample from the showing assayed 980 parts per billion gold, 3.07 oz.silver/ton, 4.26% lead and 0.64% zinc.

A limited program was carried out on the Crow claims. The Crow showing is a copper/silver zone similar to the adjacent Silver King mine, an early copper producer. The best chip sample was 60 cm long and assayed 5.2 oz.silver/ton, 1.52% copper, 0.23% lead and 0.52% zinc. A sample taken from the dump assayed 55 oz. silver/ton, 3.04% copper, 0.40% lead and 0.86% zinc. Further exploration of this area has been recommended.

Pacific Sentinel has approached a number of major resource companies to discuss possible option arrangements for further exploration. (SEE GCNL No.103, 29May90, P.1 FOR PREVIOUS INFORMATION)
