GRAND AMERICA MINERALS LTD. (GDM-V)

WEBB DRILL RESULTS - John Toporowski, president, reports Monndust Ventures Inc. and joint venture partner Grand America Minerals Ltd. have received assay results for hole M-90-5 on the Webb property located in the Mt. Milligan area some 30 miles west of McKenzie, B.C. The hole was collared 100 meters east of hole M-90-4 and drilled at -60 degrees to test a 1,000 by 1,000-meter induced polarization chargeability anomaly. See table below:

INTERVAL FEET	LENGTH FEET	COPPER %	GOLD OZ/T	From 510 to 1,005 feet, a monzonitic dyke was encountered with weak gold and marginal copper values. Management states the values obtained indicate
445 - 455	10	0.117	-	
490 - 510	20	.021	0.019	
1185 - 1205	20	.104	.104	
1235 - 1245	10	.092		
1295 - 1305	10	.083		
1400 - 1415	15	.103		

----- the presence of a gold/copper porphyry system in the vicinity. Continued drilling is planned after freeze-up. (SEE GCNL No.196, OCT.10/90, P.2 FOR PREVIOUS RESULTS)
