**MAPLE RESOURCE CORP. (MRZ-V)**

**DRILL RIG MOBILIZED** - Neil Dragovan, director, reports that Maple Resource Corp. has mobilized a diamond drill rig to their 40% project located 30 miles northwest of Stewart, B.C. Maple is earning a 60% interest from **TEUTON RESOURCES LTD.** (TUO-V) by paying \$150,000, issuing 200,000 shares and spending \$1,200,000 on exploration over four years. A 1/4 mile grid, establishment and soil sampling was done over a large gold-in-soil anomaly discovered by a single line of contour-line geochemical sampling in 1989. The 1990 work resulted in the definition of a linear, north-south trending soil anomaly over 600 meters. All samples taken within the trend were highly anomalous and five returned values from 0.049 to 0.186 oz. gold/ton. The southern 200 meters of the gold anomaly is coincident with a VLF-EM conductor. There is no outcrop exposure over the soil anomaly but immediately south, and along the projected trend, are veins discovered in 1989 that returned up to 0.19 oz. gold/ton across 5.0 feet. When the drilling is completed, Maple will begin drilling the zone at a site that returned 0.186 oz. gold/ton from a soil sample coincident with the above VLF-EM conductor. (SEE GCNL No 184, 24 Sep 90, P.2 FOR PREVIOUS INFORMATION)
