DRYDEN RESOURCE CORPORATION (DRY-V)

QUASH CREEK OPTION - Robert A. Evans, secretary, reports Dryden Resources Corp. has signed an option agreement to earn a 50% interest in the Quash Creek property from TRIUMPH RESOURCES LTD. (TUM-V), TECK CORP. (TEK.A-V,T,M) and SILVER STANDARD RESOURCES LTD. (SSO-V) by paying \$50,000, issuing 100,000 shares and spending \$1,000,000 on exploration.

The Quash property, located contiguous to Dryden's Kinaskin Lake project about 175 km north of Stewart, B.C., is comprised of 15 claims totalling about 17,000 acres. The claims cover copper mineralization associated with a porphyry stock intruding Stuhini Group volcanics, which is a similar geological setting to the Galore Creek and Shaft property copper/gold deposits. Previous exploration has outlined several structurally controlled gold-bearing zones. Gold occurrences and gold soil anomalies have been traced over a 1.5-mile distance in the central portion of the property. Within this trend, the C grid anomaly measures 300 by 300 meters from which soil values range from 100 to 9,800 parts per billion gold. Grab samples of mineralization exposed within the anomaly grade as high as 0.72 oz.gold/ton and 15.5 oz.silver/ton. The D gold zone has been traced on surface for 75 meters with the best trench samples assaying 1.1 oz.gold/ton and 6.8 oz.silver/ton over 3.0 meters. A parallel zone has also returned assay values of 0.21 oz.gold/ton and 3.9 oz.silver/ton over 3.0 meters.

Dryden is beginning a surface exploration program on the property to extend the previously discovered targets and evaluate the unexplored areas. (SEE GCNL No.179, 17Sep90, P.2 FOR OTHER PROJECT INFORMATION)
