**EURUS RESOURCE CORP. (ERR-V)**  
**THIOS RESOURCE INC. (THI-V)**

Eurus Resources also reports that it has entered into negotiations to acquire an interest from **NORTHERN CROWN MINES LTD. (NCM-V)** in the Bam property, located in the More Creek area of northwest B.C. The agreement, when completed, will be subject to regulatory approval.

The property lies about 20 miles northeast of the discovery at More Creek announced by High Frontier Resources Ltd. Previous exploration on the Bam property concentrated on a vein hosted by a felsic intrusive which has returned assay results up to 0.249 oz. gold/ton across 62 feet from surface sampling. In addition, there is a large gold geochemical anomaly underlain by a sequence of sedimentary and volcanic rocks to the north of the surface gold showing. This area of the property has received little attention in the past. Eurus plans a preliminary investigation of the area of the gold geochemical anomaly through prospecting and additional soil sampling. Estimated cost of this work is \$50,000.
