ELK PROJECT DRILL RESULTS - John W. Stollery, president, reports Fairfield Minerals Ltd. has received drill results from the Elk property located 25 miles southeast of Meritt, B.C. PLACER DOME INC. (PDL-V,T,M) can earn up to a 70% interest by making payments and exploration expenditures. (SEE GCNL No.161, 21Aug90, P.1 FOR TERMS)

Drill hole 90-33 intersected the Siwash North vein at 500 feet down dip where it returned 1,290 oz.gold/ton over a true width of 6.6 feet. This hole is 150 feet east of hole 90-29 which is 400 feet down dip. These holes indicate excellent potential for a further down dip extension of the gold-bearing structure. (SEE MAP OVERLEAF PAGE 1)

The encouraging results prompted Placer Dome to increase the 1990 budget from \$750,000 to \$1,100,000. The current 10,000-foot widespread drilling program has been expanded to 15,000 feet and will continue into November. Forty-three holes have been drilled to date this year and 12 in 1989. Of the 55 holes, 50 intersected quartz vein structures with assays received for 46 holes, of which 12, or 15%, have returned values greater than 0.230 oz.gold/ton; see table above.

The Lake zone, a new trenching discovery 3,000 feet south of Siwash North, returned values up to 0.192 oz. gold/ton over 6.6 feet from panel samples across a strongly altered quartz-veined structure. Additions to existing properties and a new claim group eight miles east of the Elk property have increased Fairfield's land position in the area to 210 square miles in nine properties, all accessible by road. Four of them, the Elk, Dill, Bank and WH, are under option to Placer Dome. (SEE GCNL No.161, 21Aug90, P.1 FOR PROJECT REVIEW)
