REESE RIVER RESOURCE CORP. (RRV-V)

HIGH GRADE ASSAYS RECEIVED - Jim Bayliss, director,
reports Reese River

Resource Corp. has received assays from the 100%-owned
Raven 1 property near Duffy Lake, 40 km east of
Pemberton, southern B.C. Trench samples returned assays
ranging from 0.129 to 19.9 oz.gold/ton. Soil samples
contained significant gold values. The samples were
taken from quartz vein material and contained visible
gold within the same host rocks of the Bralorne Pioneer
deposits. Consultants Sampson Engineering reported the
area has not been extensively prospected; there are no
known previous showings. The discovery was made by
tracing the source of pyrite-bearing float which assayed
0.356 oz. gold/ton located on a logging road which
follows the property's southern boundary. The extent of
mineralization is still unknown. (SEE GCNL No.171,
5Sep90, P.2 FOR PREVIOUS INFORMATION)
