WESTERN CANADIA

ATNA RESOURCES LTD. (ATN-V)

GOLD DISCOVERY - Peter R. DeLancey, president, Atna Resources reports recent exploration on the 100% owned Emerson property located 25 km west of Houston, B.C. has discovered the Ridge and Jewelry Box precious metal showings. Grab samples from the Ridge showing gave values of 0.54, 0.32, 0.13, 0.17 and 0.22 oz. gold/ton. Grab samples from the Jewelry Box showing gave anomalous values up to 1.2 oz.gold/ton.

The gold mineralization occurs in association with pyrite and chalcopyrite in banded quartz veins and silicified volcanic rocks. The mineralized zones appear to be greater than two meters wide. The showings occur 1.5 km apart on a major structure with overburden covering much of the ground in between. (SEE GCNL No.177, 13Sep90, P.4 FOR OTHER PROJECT INFORMATION)
