LINK RESOURCES INC. (LR-V)

FIELD CREW MOBILIZED - William Campbell, secretary, reports Link Resources Inc. has mobilized a field crew to the Inhini project located in the Iskut River area about 90 km northwest of Stewart, B.C. The Inhini property is one of five separate claim groups in which Link is earning a 100% interest from the Iskut Gold Syndicate.

The Inhini project is comprised of a contiguous group of 53 claims which have undergone little exploration. Gold was discovered in a limited 1989 program of prospecting and sediment sampling. At least 20 precious metal showings have been found.

Last year's assays included 0.483 oz.gold/ton and 1,101.45 oz.silver/ton from a grab sample of quartz vein material in pyritic, weakly silicified and ankeritic lapilli tuffs, up to 0.336 oz.gold/ton and 499.0 oz.silver/ton in narrow quartz veins at the contact of a feldspar porphyry and argillites, 0.388 oz.gold/ton and 83.0 oz.silver/ton in grabs of narrow galena, sphalerite and tetrahedrite-bearing quartz veins transecting

argillites and limestones.

Link will evaluate the numerous showings by detailed rock sampling, mapping and possibly trenching. A more regional reconnaissance prospecting program will also be conducted over unexplored portions of the claims. (SEE GCNL No.142, 24Jul90, P.3 FOR PREVIOUS INFORMATION)
