**REDFERN RESOURCES LTD. (RFR-T)**

**COMINCO LTD. (CLT-V,T,M)**

**TULSEQUAH DRILLING UPDATE** - J.M. Kenyon, secretary,  
Redfern Resources Ltd., 40%,  
and joint venture partner Cominco Ltd., 60%, provide an  
update on drilling activities at the Tulsequah Chief  
project located in NW B.C. about 40 miles east of  
Juneau, Alaska. Hole 24, which has now been completed,  
intersected 20 feet of mineralization within a wide  
stratigraphic interval of intense vent-type alteration.  
Assays are pending. The hole also encountered a thick  
post-mineral diorite intrusive sill that may have  
disrupted the continuity of mineralization in this  
area. As a result, it is not known if the mineralized  
interval is in the upper H lens or the lower A-B lens.  
Drilling of hole 25 is still in progress. Hole 25 has  
already intersected 5.5 feet of well-mineralized massive  
sulphide, which may be a new lens at a higher  
stratigraphic level than the H lens. (SEE GCNL No.177,  
13Sep90, P.1 FOR PREVIOUS INFORMATION)
