APOLLO DEVELOPMENT INC. (APV-V)

BEAVERDELL EXPLORATION PLANNED - Claude F. Mackenzie,  
president, reports

Apollo Development Inc. is planning a two phase exploration program on its Y claims located just southeast of Beaverdell in south-central B.C. An exploration program was completed last fall with encouraging results; localized geophysical and geochemical surveys revealed coincident anomalies. Although the Beaverdell mining camp is historically known for its silver/lead/zinc deposits, there is significant gold mineralization on the Y claims. In 1970, a 10-ton shipment of gold/silver ore averaging 2.08 oz.gold/ton and 7.80 oz.silver/ton was shipped to the smelter at Trail, B.C. The first phase of the new program would include prospecting, geological mapping and diamond drilling. Phase II, contingent upon Phase I results, will consist of follow-up diamond drilling and preliminary exploration of the unexplored portions of the property. Apollo Development was recently posted and called for trading on the VSE. (SEE GCNL No.60, 26Mar91, P.6 FOR MORE DETAILS)
