UNIVERSAL TRIDENT INDUSTRIES LTD. (UTI-V)

**GEOPHYSICS PLANNED** - Ronald Philp, president, reports

Universal Trident Industries Ltd. is planning an airborne geophysical survey to be conducted over the 50%-owned, 252-unit Gloria claim group located near the confluence of the Iskut and Stikine Rivers about 110 km northwest of Stewart, B.C. SEE MAP OVERLEAF PAGE 1. The other 50% is owned by an affiliated private company. The property is situated seven km west of the Eurus/Thios Rock & Roll project on which the Black Dog volcanogenic massive sulphide deposit is being explored.

The Gloria group covers a 16-km length of favourable sedimentary-volcanic sequence that host the Black Dog deposit and includes the Johnson Creek silver/lead/zinc occurrence, which reportedly consists of vein material in a fracture zone up to 10 feet wide carrying appreciable silver/lead/zinc/copper values. An earlier government publication reports values of 10.82 oz. silver /ton, 3.43% copper, 5.04% lead and 1.47% zinc.

Universal Trident also has a 50% interest in the Doo group of 72 units which lies within and is totally surrounded on three sides by the Rock & Roll claims. The other 50% is under option to HALCYON RESOURCES LTD. (HYN-V) which will be carrying out a comprehensive exploration program. Universal Trident will be carried at no cost through the first \$600,000 of exploration on the Doo group. (SEE GCNL No.32, 14Feb91, P.3 FOR OTHER TRIDENT INFORMATION)
