CONSOLIDATED PARKLANE RESOURCES INC. (PK-V)

OUTLAW-INLAW PROPERTY OPTIONED - Kenneth Shannon, president, reports Consolidated Parklane Resources Inc. has agreed for Glider Developments Inc. to earn a 50% interest in the Outlaw-Inlaw property by paying \$100,000, issuing 100,000 shares and spending \$1,200,000 on exploration over three years. A finders fee of 50,000 shares will be paid, subject to regulatory approval. The property is located between the Tulsequah Chief and Golden Bear mines about 80 km east of Juneau, Alaska in NW B.C.

The Outlaw mineralized zone is defined by a strong 2.5 by 0.5-km gold/arsenic/antimony anomaly in soil and talus samples. Drilling has been completed on the Outlaw in only one site where there is extensive clay alteration. Gold values up to 0.242 oz.gold over 0.95 meters were obtained. The rest of the large gold/arsenic/antimony anomaly has never been drilled.

The Inlaw property has reported gold values in outcrop up to 1.3 oz/ton in an area of quartz, chalcopyrite and galena veining. A strong 0.8-km long gold/arsenic/antimony anomaly is located adjacent to the above sample. None of the anomalies on the Inlaw property have been drill tested. Glider will be operator and is currently preparing for the 1991 first-phase program estimated to cost \$200,000. (SEE GCNL No.57, 21Mar91, P.2 FOR PREVIOUS INFORMATION)
