-----'officer of
Westpine has reported the first 1991 drilling results from the Taseko copper-gold property 140 miles north of Vancouver, B.C.. The most significant results occur in holes W91-38 and 39 which are approximately 4,200 and 3,600 feet, respectively, east of the Empress area. Visual reports indicate that both holes intersected upper and lower levels of mineralization in what is referred to as the East Zone. This area warrants follow-up drilling. The two first holes were drilled in the Empress Zone. Hole W91-36 intersected both the Upper and Lower North Zones were as W91-37 intersected only the Lower North Zone. Holes W91-36 and W90-32 showed the Lower Zone to be narrowing sharply to the west. Holes W91-39 indicates the Lower North Zone should be further drilled.

The program has been budgeted at \$550,000 and is being funded by ASARCO Exploration company, which holds an option to earn a 60% property interest (See GCNL NO.117, June 18, 1991, P2.) A preliminary pre-feasibility report by James Askew & Associates of Denver, Colorado has calculated 11,078,000 tons of 0.61% copper and 0.023 oz.gold/ton in the Empress zone. at a 0.4% copper cut off grade.
