1/2-MILE LONG INTERCEPT CUT - Robert G. Hunter, chairman, reports Taseko Mines Ltd. has received assay results from the first hole of a large diameter drilling program now underway at the Fish Lake gold/copper deposit located 60 miles west of Williams Lake. SEE CROSS-SECTION OVERLEAF PAGE 1.

Taseko and COMINCO LTD. recently concluded an agreement resolving six years of litigation whereby Taseko has exclusive right to control the property for the next three years, after which time the claims will revert to Cominco with Taseko retaining a 20% NPI.

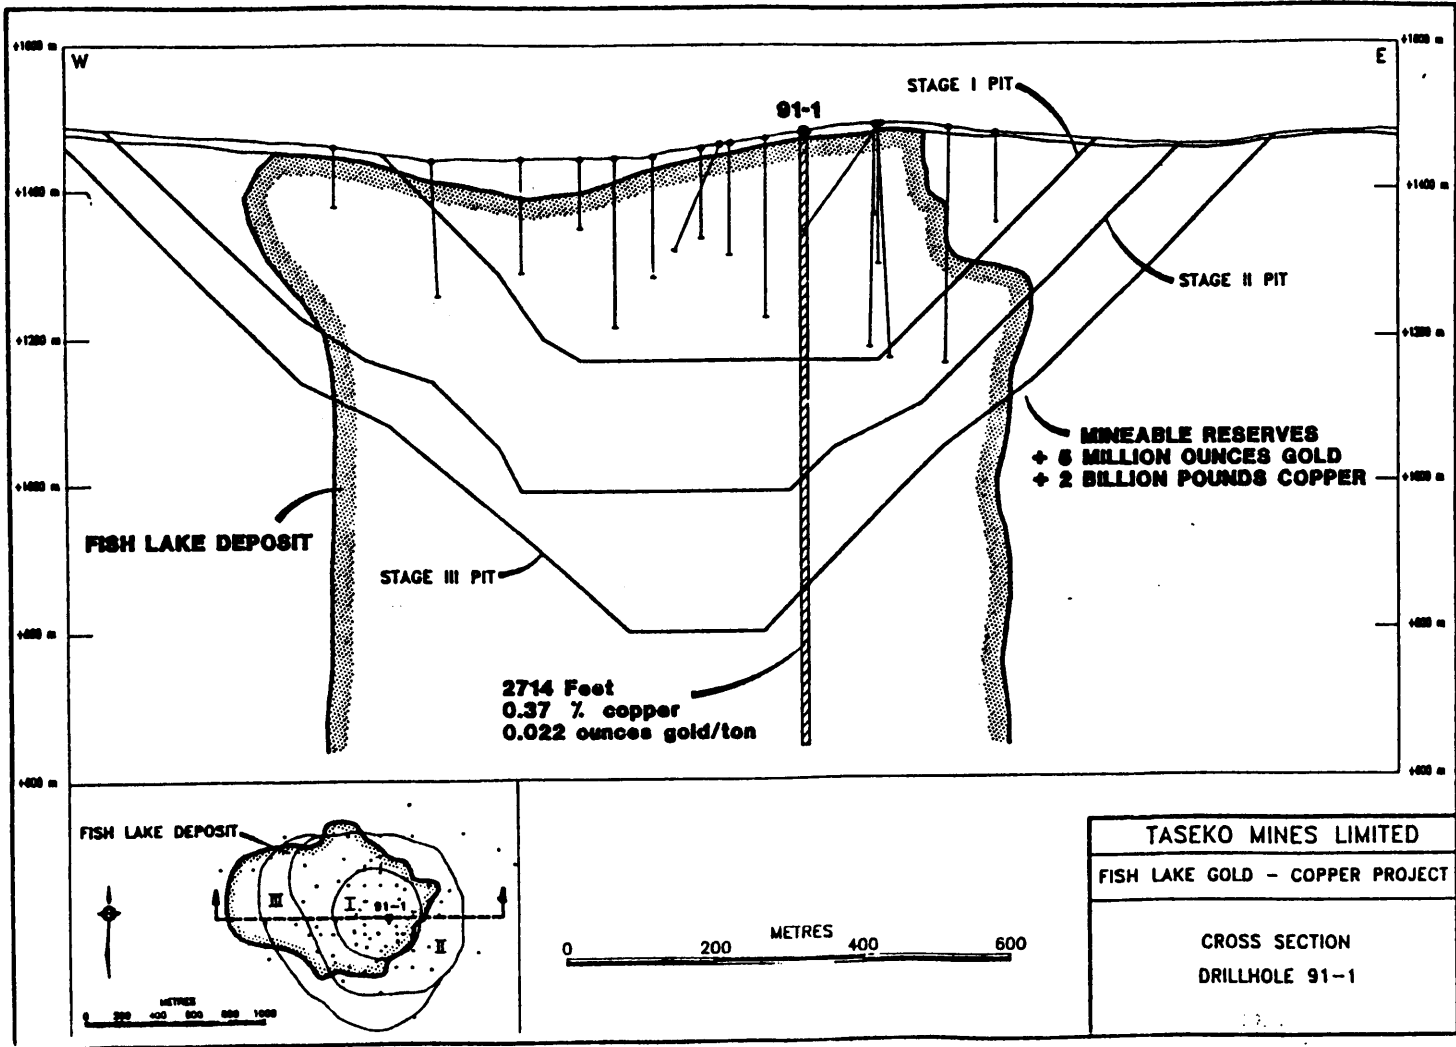

Vertical hole 91-1, collared on the eastern side of the deposit, intersected continuous ore grade gold/copper mineralization over its entire 2,714-foot length. The hole stopped in ore grade mineralization when the depth capacity of the drill rig was reached. The hole has upgraded and expanded mineable reserves. The Fish Lake deposit is cylindrical with a minimum diameter of 3,000 feet. Drill hole 91-1 stopped 500 feet below the bottom of a preliminarily designed 600,000,000-ton open pit at a waste-to-ore ratio of 1.3:1. Drilling is continuing with two rigs. Holes 91-2 and 3 are in progress at depths of 2,100 feet and 2,000 feet respectively. Copper mineralization is evident throughout the cores.

A comprehensive metallurgical test program for Fish Lake ore is nearing completion with excellent results that confirm high recoveries of copper and gold to a conventional copper flotation concentrate. Documentation of testwork results is expected during September. On a fully diluted basis, Taseko Mines has 8,827,400 shares outstanding. (SEE GCNL No.142, 24Jul91, P.1 FOR OTHER CORPORATE AND FISH LAKE PROJECT INFORMATION)
