

EURUS RESOURCE CORP. (ERR-V)
COLUMBIA GOLD MINES LTD. (COB-V)

SPECTRUM DRILL RESULTS - Columbia Gold Mines and Eurus Resources and have received assays from the drilling program on the Spectrum property located 200 km north of Stewart, northwest B.C. near the Village of Iskut. Eurus can earn a 50% interest from Columbia by spending \$8,000,000 on exploration over four years.

Drill hole 91-71 was collared in the volcanic host rocks and drilled to the west as a 200 foot step-out to the north of holes 63 and 46. Hole 63 cut 0.71 oz.gold/ton over 20 feet with hole 46 returning 0.20 oz.gold/ton over 25 feet in an upper section, followed by a second zone grading 0.36 oz.gold/ton over 33 feet.

Hole 71 intersected a 25 foot siliceous zone containing chalcopyrite, sphalerite and molybdenum mineralization within which zone a 15 foot section contain intervals of coarse-grained visible gold. Hole 71 confirms the north-trending continuity of the gold mineralization.

HOLE NO.	INTERVAL FEET	LENGTH FEET	GOLD OZ/T	As reported in GCNL No.147, 31Jul91, P.2
91-71	378.5 - 388.7	10.2	0.99	hole 76 intersected
Incl.	382.1 - 385.7	3.6	2.63	visible gold 210 ft
91-69	284.4 - 288.7	4.3	1.15	up-dip from the high
	337.2 - 354.2	17.0	.11	grade intersection
	367.4 - 377.2	9.8	.11	in hole 71. Assays
91-70	595.3 - 601.9	6.6	.14	from hole 76 are
91-68	510.0 - 686.0	176.0	.02	expected in a few

days. Holes 69 and 70 were drilled east to confirm continuity of gold bearing zones between hole 66 to the north and hole 59 to the south. Holes 67 and 68 were drilled to the east to locate the monzonite/volcanic contact. Hole 67 was abandoned due to lost circulation. Hole 68 ended in monzonite and cut several intervals of porphyry-style mineralization. Upon completion of hole 78, the gold bearing structures will have been partially tested over a 2,000-foot strike length, with the deepest intersection to date at 460 feet deep. Within this block, two vertically-dipping zones are indicated. The zones remain open along strike to the north and south and to depth. (SEE GCNL No.146, 30Jul91, P.1 FOR DETAILED PROJECT SUMMARY AND DRILL HOLE LOCATION MAP)
