> PACIFIC CENTURY EXPLORATIONS LTD. (PAX-V) <u>TICKER TAPE RESOURCES LTD.</u> (TKT-V) LARGE ANOMALOUS INTERSECTION CUT- William Campbell, secretary, reports Pacific

Century Explorations Ltd. and Ticker Tape Resources Ltd. have received assays for two holes drilled on the <u>Paydirt project located in the Galore Creek area some</u> <u>100 miles northwest of Stewart, B.C.</u> The companies are jointly earning a 50% interest in the property which hosts the Paydirt deposit of 204,000 tons grading 0.12 oz. gold/ton. Pacific Century holds an option from <u>SILVER STANDARD RESOURCES INC.</u> (SSO-Y) to earn 50% by paying \$125,000, issuing 100,000 shares and spending

\$1,315,000 on exploration with Ticker Tape to earn 50% of Pacific's interest in the option by providing \$175,000 for exploration in 1990 and then costs to be shared 50/50.

The drilling tested two zones of combined induced polarization geophysical as well as gold and gold-in-soil geochemical anomalies 6,000 feet and 1,800 feet respectively, southwest of the Paydirt deposit. The first hole returned an anomalous interval of about 0.12% copper over 116.5 feet. The second hole did not contain significant values. Prospecting in the area between the drill holes discovered numerous quartz vein and sulphide bearing shear zones from which initial grab samples have returned up to 0.159 oz.gold/ton and up to 19.75% copper.
