LEGION RESOURCES LTD. (LGN-V)

MORE WORK PLANNED - H. Tysseland, president has reported the 1990 drilling program by Legion Resources on the 13 claim Leg property 12 km north of Creston B.C. was not up to expectations. Management remains optimistic. Hole No. L 90 - 1 is the most encouraging, with assays of 10.20% zinc across 8.6 ft. It is hoped further drilling to the north-east and on strike, will encounter similar grades and widths. The zone has a considerable strike length. A new zone to the west and parallel to the main zone, warrants investigation.
