PRESTON RESOURCE CORP. (PRQ-V)

DRILLING PLANNED FOR STRATEGIC CLAIMS - Logan B. Anderson,

director, reports Dundee Resources Corp., and Preston Resource Corp. have planned a \$300,000 diamond drilling program on the Rob claims, five km southwest of the SNIP mine and eight km south of the Eurus/Thios Rock & Roll project. Preston can earn a 50% interest from Dundee in the Rob 1,2,3 and 5 claims by spending \$250,000 on exploration over two years. Exploration in 1990 defined three significantly mineralized target areas. George M. Leary, M.Sc., P.Eng., consultant, concluded the mineralized areas have settings similar to other gold and silver deposits and prospects in the Iskut River area. The three mineralized areas of the Rob claims include the following vein sample assays:

<u>LOCATION</u>	<u>GOLD</u> <u>OZ/T</u>	<u>SILVER</u> <u>OZ/TON</u>	<u>COPPER</u> <u>%</u>	<u>LEAD</u> <u>%</u>	<u>ZINC</u> <u>%</u>
Central Target (450 by 250 m)	0.197	263.1	2.54	2.24	8.37
South Target (350 by 110 m)	.169	139.93	.10	8.16	10.59
Southwest Target (Veins & Float)	.646	187.38	2.89	20.80	2.82

The Phase I diamond drilling and surface evaluation program will start in May with follow-up prospecting, mapping and rock chip sampling proposed for other potential target areas. Contingent upon Phase I results, a \$700,000 Phase II program may be considered.
