SB-90-7	318.2 - 321.5	3.3	.76			

ROSSLAND DRILL RESULTS - Dal S. Brynelsen, president, reports Antelope Resources Inc. and 50/50 joint venture partner BRYNDEN VENTURES INC. (BNV-T, Alberta) has received drill results from the 1990 Rossland, B.C. Southbelt drilling program. Drill holes 90-2,3 and 4 were widespread exploratory holes targeted on the polymetallic Bluebird/Mayflower zone and show the continuity of the mineralized structure at depth and along strike. Hole 90-3 with 12.5 feet of 0.33 oz. gold/ton demonstrates the gold potential of the Bluebird zone at depth. Drill holes 90-5,6 and 7 intersected the Maid of Erin gold zone (formerly the New North zone), and show the continuity of gold mineralization at intermediate depths.

Drilling is now underway on the Rossland Northbelt properties where YANGOLD RESOURCES INC. (YN-V) is earning a 50% interest from the Antelope/Brynden joint venture (SEE GCNL No.243, 17Dec90, P.1 FOR PREVIOUS DRILL RESULTS)
