WHITE KNIGHT RESOURCES LTD. (WKR-V)

GOLDPAC INVESTMENTS LTD. (GPK-V)

TRENCHING RESULTS - J.M.Leask, president, reports Goldpac Goldpac Investments Ltd. has

received assays from a trenching program on the Lookout property located southwest of Cranbrook, B.C. The work defined a large zone of gold mineralization in altered quartz monzonite and Aldridge sediments along the Cranbrook fault. The geologic environment is similar to the Beartrack deposit near Salmon, Idaho. The Lookout trenches tested a 525-foot strike length along the Cranbrook fault. Assays from chip samples are below.

TRENCH LOCATION	WIDTH FEET	GOLD OZ/T	Grab samples of quartz stockwork in monzonite taken from Trench
31 + 00N	66	0.035	32 + 00N returned
32 + 00N	98	.045	grades of 0.592 oz.gold/ton,
32 + 30N	85	.132	3.0 oz.silver/ton and 1.7% lead

----- and 0.438 oz.gold/ton, 2.5 oz.silver/ton and 1.2% lead. A significant area of anomalous gold, lead, zinc and silver geochemistry remains untested on the east, west and south.

White Knight Resources Ltd. has an option to earn a 50% interest in the property above 150 meters above sea level and to acquire a 40% interest below 150 meters ASL by paying \$890,000, issuing 50,000 shares and spending \$1,000,000 on exploration for the 50% option and \$2,000,000 for the 40% option.
