NO.18(1991)
JANUARY 25, 1991

WESTERN CANADIAN INVEST

BARYTEX RESOURCES CORP. (BTX-V)

FURTHER MYSTERY/CHANCE WORK PLANNED - H.S.Aikins, president, reports Barytex Resources Corp. has been informed NORANDA INC. will retain its option to earn a 50% interest in the Mystery and Chance property. The 80-unit claim group is located 100 km north of Stewart, B.C. directly south of the Iskut River and adjacent to the proposed Iskut Road. It is expected Noranda will spend some \$200,000 during the 1991 season.

High grade gold mineralization was discovered near the east boundary of the Barytex ground that was traced for about 900 meters within the claim block. The mineralization appears associated with a linear structure that can be traced for four km on the Barytex property. The mineralized outcrops are located above 3,000 feet in elevation. Work at lower levels is hampered by vegetation and a layer of volcanic ash.

Rock chip and float samples collected within the zone returned numerous gold values ranging from 0.12 to 2.088 oz/ton. Individual quartz veins are commonly less than 20 cm wide and no samples represent widths greater than one meter.

Further work has been recommended to define drill targets within the presently defined zone of economic potential. Geophysical work and detailed mapping elsewhere on the claims has also been recommended. (SEE GCNL No.182, 20Sep90, P.1 FOR PREVIOUS INFORMATION)
