CALDERA RESOURCES LTD. (KDA-V)

MARSHALL CREEK EXPLORATION RESULTS - E.Ascroft, director, reports exploration results have been received from the Marshall Creek property, 60 km west of Lillooet, and 25 km NE of Goldbridge, B.C. Caldera can earn a 100% interest by paying \$75,000 and issuing 200,000 shares in stages. The work continued testing the Detail Area 2, an anomalous gold-in-soils zone indicated by an earlier soil sampling program.

The initial trenching program across a lower portion of the anomalous zone exposed mineralized bedrock along a 75-meter length of a 135-meter trench. The later trenching cross-cut a mineralized zone at a higher elevation. In this upper zone, three cross-cuts were made along a 70-meter length. Channel samples across the mineralized sections returned values as high as 0.48 oz.gold/ton. The zone is open at both ends. It has not been established whether the lower and upper zones are separate or interrelated. Further trenching, mapping and detailed sampling is planned prior to drilling.
