## VARITECH RESOURCES LTD. (VAR-V)

**DRILLING PLANNED** - Bradford J. Cooke, president, reports Varitech Resources Ltd. will start the 1991 drilling program on the Big Onion copper property located 15 km east of Smithers, B.C. about August 1. Varitech can earn a 100% interest in the Big Onion property by paying \$4,000,000 and issuing 200,000 shares over four years, subject to a 3% net smelter royalties, which can be bought out for \$5,000,000. Heavy equipment is now on the property preparing drill sites for the Phase 1 drilling program, consisting of 15,000 feet in some 20 drill holes. A two-phase, \$600,000 drilling program is planned for Big Onion, this year to expand the tonnage and improve the grade by in-fill and step-out HQ core diamond drilling. Canadian Superior Exploration Company, the last operator to drill the property, estimated a geological reserve for the Big Onion deposit of up to 100,000,000 tons grading 0.42% copper and 0.02% molybdenum, or more than 800,000,000 pounds of contained copper.
