EURUS RESOURCE CORP. (ERR-V)

COLUMBIA GOLD MINES LTD. (COB-V)

MORE VISIBLE GOLD IN CORE - John S. Brock, president, Columbia Gold Mines Ltd., operator, and Eurus Resource Corp., report diamond drill hole 91-76 on the Spectrum project has intersected a 16 and a 33 foot long interval of visible gold mineralization. Eurus can earn a 50% interest in the property, located in the North Iskut River area near the Village of Iskut, northwest B.C., from Columbia by spending \$8,000,000 on exploration over four years.

The mineralization is described as having abundant visible gold, both coarse and fine grained, associated with zones of copper and zinc sulphide minerals.

Hole 91-76 is located on the same drill section as hole 91-71, intersecting the two principal vein structures about 210 feet above those in hole 71. Assay results for holes 91-68, 69, 70 and 71 should be received within two days. (SEE GCML No.146, 30Jul91, P.1 FOR PROJECT REVIEW AND DRILL HOLE MAP OVERLEAF P.1)
