APOLLO DEVELOPMENT INC. (APV-V)

NO FURTHER WORK RECOMMENDED - C.F.Mackenzie, president,
FOR BEAVERDELL PROJECT reports Apollo Development
has completed a Stage I
exploration on the Y claims just SE of Beaverdell, in
south-central B.C. The program comprised induced
polarization surveys and 2,186 feet of diamond drilling.

On Zone A, the IP results established an east-west
trending shear zone containing localized zones of
massive sulphides and/or quartz. Two holes were drilled
to test the IP anomalies on the zone. Hole 91-2
retruned 5.12 oz.silver/ton over 1.5 meters. Hole 91-1
intersected a 14-meter sulphide zone, of which a
1.8-meter section assayed 960 parts per billion gold and
a 15.5 ppb silver.

On Zone B, the location of the significant surface
gold values, it was tested for the depth extension of
the zone. A 2.6-meter wide zone was intersected which
returned a weighted average grade of 0.066 oz. gold/ton
and 0.15 oz.silver/ton. The zone included two-cm
sulphide bearing quartz veins which returned 1.31 oz.
gold/ton and 0.34 oz.silver/ton.

While the claims do contain gold and silver values,
they are sub-economic and the company's consultant

advises no further work should be done. (SEE GCNL
