NOTE: All holes drilled on Section 52+75N

ROCK & ROLL DRILL RESULTS - Murray Pezim, chairman,
reports Eurus Resource Corp.
and 50/50 joint venture partner have received drilling
results from along the northwestern down-plunge
direction of the Black Dog deposit at the Rock & Roll
property 10 miles north of the SNIP mine in the Iskut
River area of northwest B.C.

The companies can jointly earn a 100% interest by
spending \$1,000,000 by 5Mar95 and may also pay PRIME
RESOURCE GROUP INC. (PRU-V) \$500,000 by 13Mar95,
subject to a 1% net smelter return royalty. The three
holes completed represent the northernmost economic
intersections on the Black Dog to date which are
expected to add about 40,000 tons to the geological
reserve estimate of 640,000 tons grading 0.072
oz.gold/ton, 9.8 oz.silver/ton, 0.79% lead, 3.08% zinc
and 0.64% copper. Hole RR91-89, completed on Section
52+25N, returned three one-metre intervals with assays
ranging up to 0.029 oz.gold/ton, 4.93 oz.silver/ton and
1.44% zinc.

Drilling will resume shortly on a wide-spaced
step-out pattern over the entire 7,000-meter strike
length on the Rock & Roll and adjacent Bornagain
properties. The Bornagain property is a joint venture
between Eurus Resources, 37.5%, Thios Resources, 37.5%,
and CONSOLIDATED BEL-AIR RESOURCES LTD. (CBT-V), 25%.

A recently completed Aerodat airborne electro-
magnetic survey over the west part of the Rock & Roll
property defined additional anomalies that will be
followed up. (SEE GCNL No.119, 20Jun91, P.2 FOR
