

**ROCK CREEK RESOURCES LTD. (RCL-V)**

**DRILLING RESULTS** - Rock Creek Resources Ltd. has received the final assay results from the second phase of drilling on the Silver Dawn property located in Rock Creek, B.C. where it is earning a 100% interest by paying \$5,000 and issuing 100,000 shares. Eighteen more holes were drilled with mineralization encountered in all holes. Sulfide rich "black lead" mineralization and banded sulfides mineralization account for the greater part of the high grade mineralization. A summary of the mineralized intersections by each hole has been calculated using a weighted average across the mineralized sections.

Based on the drilling to date, estimated tonnage of mineralized rock amounts to about 270,000 tons with an average grade of 0.024 oz.gold/ton, 3.01 oz.silver/ton, 0.38% lead and 0.66% zinc. Results of the drilling to date show the mineral deposit lends itself to possible open pit mining methods as mineralization was encountered at very shallow depths and the deposit is still open on all sides.

The company is also negotiating on additional financing to carry out additional drilling and exploration work on the Silver Dawn property as well as funding for a work program on the Mic Mac claims located in the Camp McKinney area. (SEE GCNL No.145, 27Jul90, P.1 FOR PREVIOUS RESULTS)
