

EURUS RESOURCES CORP. (ERR-V)

THIOS RESOURCES INC. (THI-V)

ROCK & ROLL UPDATE - William Campbell, secretary,
reports Eurus Resource Corp. and
joint venture partner Thios Resources Inc. are
continuing their diamond drilling program on the Rock &
Roll project located 10 km north of the SNIP mine in the
Iskut River area some 100 miles northwest of Stewart,
B.C. The companies can jointly earn a 100% interest by
spending \$1,000,000 by 5Mar95 and may also jointly pay
\$500,000 to PRIME RESOURCES GROUP INC. (PRU-V) by
13Mar95, subject to a 1% net smelter return royalty.

Recent drilling has increased the strike length of
the Black Dog deposit to a minimum 600 meters.
Mineralization remains open in both directions and at
depth. Within the Black Dog deposit is a higher grade
core of semi-massive and massive sulphide mineralization
as seen in holes RR91-36 and RR91-37, which respectively
returned 0.080 oz.gold/ton, 20.05 oz.silver/ton, 2.16%
lead, 6.41% zinc and 1.08% copper over 19.7 feet, and
0.093 oz.gold/ton 11.56 oz.silver/ton, 1.09% lead, 5.07%
zinc and 1.09% copper over 32.8 feet. This high grade
core has excellent continuity from hole to hole and
section to section. Twelve of the new holes have
intersected this semi-massive to massive sulphide
mineralization over thicknesses between two and five
meters; assays are awaited.

Elsewhere on the property, linecutting, basal till
sampling, prospecting and various geophysical surveys
are continuing. HLEM surveying has begun on the north
side of the Iskut River, some 1,500 meters northwest of
Section 53+00N; thus far this survey is confirming EM
conductors detected by the 1990 airborne geophysical
survey. An 80-person exploration camp is being
constructed on the Rock & Roll project. (SEE GCNL
