ECSTALL MINING CORPORATION (EAM-V)

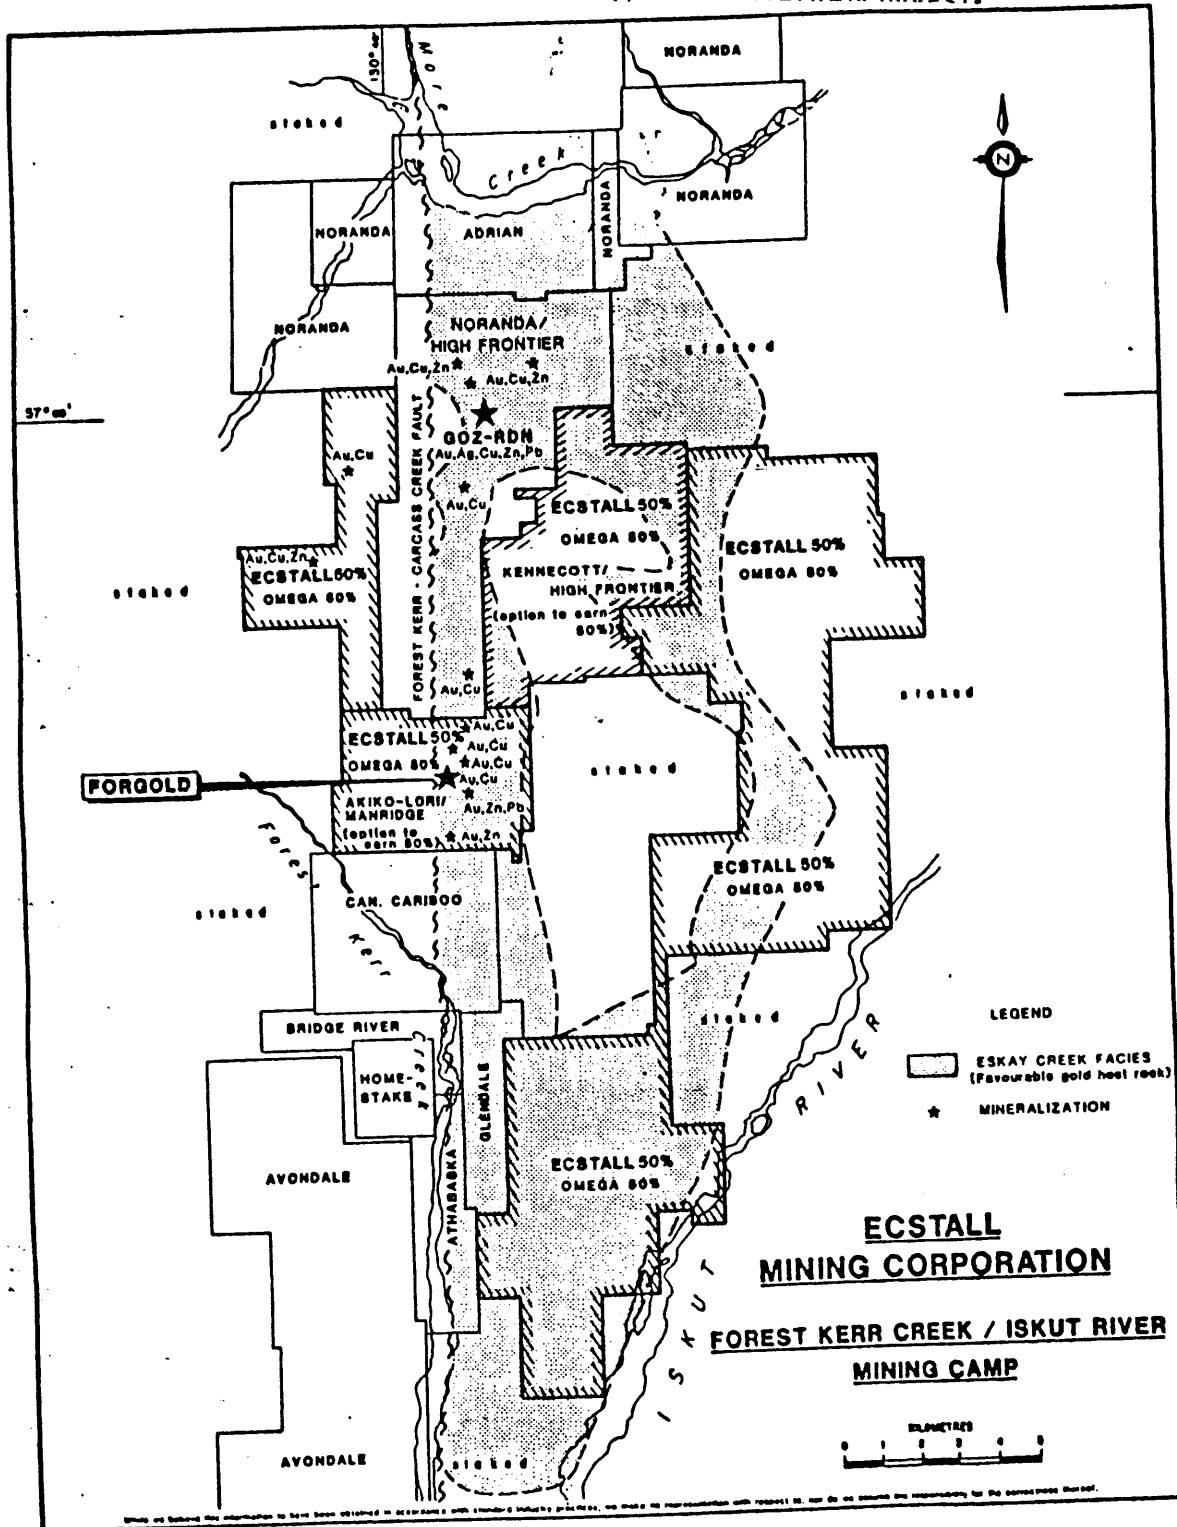

FOREST KERR PROGRAM PLANNED - Chris W. Graf, president of Ecstall Mining has provided the MAP OVERLEAF showing the location the holdings in the Forest Kerr Creek, Iskut River area 100 km north of Stewart, B.C. The property is located 12 miles west of the Stewart Cassiar highway at Bob Quinn Lake. He noted the most interesting properties in the area are the Foregold owned Ecstall 50%, and 50% by OMEGA GOLD CORPORATION (OGC-V) with AKIKO-LORI GOLD RESOURCES LTD. (AKI-V) holding an option to earn a 50% interest. MANRIDGE EXPLORATIONS LIMITED holds an option to buy 40% of Akiko-Lori's option, or a net 20% property interest. If the options are exercised the property interests could be Akiko-Lori 30%, Manridge 20%, Omega 25% and Ecstall 25% and property operator.

Akiko-Lori has planned a \$400,000 exploration program for 1991 including diamond drilling. The Foregold property hoists a gold base metals mineralized system that contains many mineralized showings scattered throughout an area over 2,000 meter long and 500 meters wide. In 1990 grab samples from instu outcrops assayed up to 3.3 oz. gold/t. Many of the showing contain copper, lead and zinc with high grade assays of 31% copper, 14.7% zinc and 3% lead. The interest in the Foregold project is increased since it is in the same geological structure as the Goz-Rdn where Noranda - Frontier drilled some mineral showing in 1990.
