

NOBLE METAL GROUP INCORPORATED (NMG-V)

INTERESTING GOLD AND PLATINUM ASSAYS - Dorothy Dennis
REPORTED FROM OPTIONED PRINCETON CLAIMS president has
reported Nobel

Metal has acquired an option to buy a 100% interest,
subject to a 3% net smelter return royalty, in one
claim, 16 units, 12 miles north of Princeton, B.C. To
exercise the option Nobel Metal must: issue 400,000
shares, of which 100,000 are due upon signing and the
balance at intervals; pay \$30,000; and do a minimum of
exploration work including diamond drilling. Prior to
this acquisition Noble Metal had 6,736,555 shares issued.

Since the vendors, Dr. Norris Proskin and Ernst
Wedekind, acquired the property in mid-1988 they have
spent \$76,000 on exploration, including botanical and
geochemical surveys and 3,700 feet of diamond drilling
in 7 holes testing a volcanic tuff.

The vendors prepared a mixture of core samples from
diamond drill hole No.'s 6 and 7 for analysis by
bromine/chlorine leach testing, the weight of each
sample was 10 lbs. The actual footage of the sample
spacings of Hole No. 6 were reported by the vendor as
being at various intervals from 120 feet to 490 feet.
The sample spacings for Hole No. 7 were from 145 ft. to
490 ft. Hole No. 6 showed 0.48 oz. gold/t; Hole No. 7
assayed 1.80 oz. gold/t plus 0.80 oz. platinum/t.

Noble Metal is having the diamond drill cores
logged and a geological report prepared. The company is
preparing 125 feet of continuous core from diamond drill
hole No. 7 for check assay.
