"Reliable Reporting"

APPIAN RESOURCES LTD. (APL-V)

FURTHER WORK PLANNED - Appian Resources has reported the G-South gold-copper-zinc property in the Caribou Mining Division of B.C. is under option to Valerie Gold Resources which can earn a 50% interest by spending \$750,000 by July 31, 1994.

The first phase program determined the stratigraphy and test the mineral distribution within a thick sequence of basic to acidic volcanics and overlying sediments. Results of the preliminary drill program are considered favourable and indicate that the property has a potential for hosting volcanogenic related mineralization. Results included: 1.4% copper and 0.16 oz/ton gold over 1.5 feet; 0.6% zinc over 10 feet; and 0.22% copper and 0.004 oz/ton gold over 30 feet. Valerie is currently planning a second phase program. At Sept. 30, 1991 Appian Resources had a working capital deficit of \$122,600 and had 7,374,317 shares issued.
