BARKHOR RESOURCES INC. (BHO-V)

MASSIVE SULPHIDES INTERSECTED AT DARLIN CLAIMS - Wm. Daly,
president,

Chapleau Resources Ltd., and Barkhor Resources Inc. have intersected massive sulphides during the current drilling program at the Darlin property located in the Purcell Camp, 18 km southwest of Cominco's Sullivan mine at Kimberley, southeast B.C. Barkhor can earn a 50% interest by spending \$300,000 on exploration over two years, including a minimum of \$150,000 in year one. Chapleau can earn a 100% interest, subject to a 3% net smelter return royalty, by issuing 150,000 shares in stages and spending \$300,000 on exploration over three years. (SEE MAP OVERLEAF PAGE 1 GCNL No.193, Oct.7/91)

The drill program is testing geophysical and geochemical anomalies located near the top of the Lower Aldridge Formation (Sullivan time). Hole No.1 is completed and hole 2 is nearing completion as of Oct.9.

Hole 2 intersected five massive sulphide beds

ranging in size from 15 to 60 cm, consisting mainly of pyrrhotite mineralization. One bed is about 30% sphalerite (zinc) in a pyrrhotite matrix. Hole 2 will test two of the five geophysical targets. Drill hole 3 will step down in stratigraphy to test the two largest and strongest conductors. Kokanee Explorations is operator. (SEE GCNL No.193, Oct.7/91, P.1 FOR PREVIOUS INFORMATION)
