WESTERN CANADIAN INVESTM

LEMMING RESOURCES LTD. (LMM-V)

HARRISON LAKE CLAIMS - Lemming Resources Ltd. has
TO BE FURTHER EXPLORED acquired for 100,000 shares and
a 3% interest in the Toil claim

55 km NW of Harrison Hot Springs, B.C. The claim covers
a zone of pyritic quartz sericite schist in the Fire
Mountain formation, traced over 1300 meters by 400
meters, plus several gold geochemical soil anomalies of
up to 394 ppb have been identified.

Percussion and diamond drilling conducted in 1984
and 1985 intercepted 5 feet of 0.034 oz.gold/t and 5
feet of 0.028 opt gold. Several gold and base metal
soil geochemical and IP anomalies were not tested by
trenching or drilling. Also, one gold anomaly extends
beyond the old survey grid.

The company will now begin exploration on these
areas immediately with the program consisting of a close
spaced soil geochemical grid and trenching. A major
logging camp and landing are on the property.
