Springer Resources 37.5%, Cove Resources 12.5%, and Granges 50%, operator have reported additional drill hole assay results from the Unuk joint venture project, 65 km north of Stewart, B.C. Holes J91-16 through J91-19 were drilled on the 900 zone, to test the stratigraphy hosting an intercept of 1.21 oz. gold/t over 13.1 feet in hole J91-7. The intervals in J91-128, which is the furthest stepout to the north on the 900 zone, are part of a 167.3 foot interval from 377.3 - 544.6 feet which has anomalous gold results. Hole J91-20 was drilled on the 750 zone, 165 feet south of J91-10 which returned 0.35 oz. gold/t over 3.2 feet. Drilling is continuing. Hole No. J91-26 is in progress, a stepout hole testing a geochemical anomaly on section 17+00N.
