MORE SKY CREEK DRILLING RESULTS - William Campbell, secretary, Adrian Resources Ltd., reports more assays have been received from drilling on the Sky Creek property located immediately south of the SNIP mine and adjoining the Skyline Johnny Mountain property in the Iskut River area of northwest B.C. Adrian can earn a 51% interest from Skyline Gold Corp. by spending \$1,600,000 on exploration, issuing 200,000 shares and granting Skyline options to buy 150,000 shares of Adrian at prices varying from \$2.75 to \$4.75 per share over three years.

Seven further holes were completed at the SMC showing. See table above. Drill holes SC91-06, 08 and 13 returned no significant results. Two holes were completed in the area of the Tillerman showing from which hole SC91-12 returned a number of geochemically anomalous sections, including 1.34% zinc over 29.5 feet and 1.54% zinc over 19.7 feet. Hole SC91-07 at the Tillerman showing returned no significant values, nor did holes SC91-14 and 15 drilled at the Upper Road showing and the original Skyline Road showing, respectively. A number of precious and base metal occurrences have been discovered at the Sky Creek property this year, including the SMC, Moonshadow, Cliff, Tillerman, Evermore, Blues Breaker and Copperhead. Data compilation and interpretation is now underway prior to further field work. (SEE GCNL No.188, 30Sep91, P.1 FOR PREVIOUS DRILL RESULTS)
