SKEENA RESOURCES LTD. (SKE-V)

SUTSUT PROJECT REPORT - George Slightham, president, reports Beauchamps Exploration Inc. and 50/50 joint venture partner Skeena Resources Ltd. have completed the initial phase of exploration on the Sutsut project, located 200 km north of Smithers,

B.C. On the Day showing, systematic geochemical and geophysical surveys detailed and expanded this drill target. This area was drilled by Falconbridge in the 1970's, yielding 198 feet of 0.027 oz.gold/ton and 0.67% copper, 89 feet of 0.44% copper and 0.024 oz.gold/ton.

On the new Porcupine zone, stratabound copper/gold mineralization hosted by felsic to intermediate volcanics were identified over three km. Rock sampling from exposed margins of this zone returned from 1-5 grams gold/tonne and 1.25-5.40% copper. A trenching program has begun to channel sample the poorly exposed core of the mineralized zone. If a higher grade core is identified, drilling will be considered.
