KOALA RESOURCES LTD. (KOR-V)

NEW GOLD ZONE DISCOVERED - Donald R. Sheldon, president, Akiko-Lori Gold Resources Ltd. reports recent exploration has uncovered a new gold zone on its Kitgold property held jointly with Koala Resources Ltd. on the west side of the Kitsault River Valley about 50 km southeast of Stewart, B.C.

A regional mapping and rock sampling program located a number of gold and silver-bearing quartz veins occurring within a highly sheared and altered felsic volcanic unit stratigraphically on the hanging wall side of a major north-trending linear. Analytical results obtained to date confirm the quartz vein system with associated polymetallic mineralization forms a zone over 1.5 km in length and exceeding 30 meters in width trending sub-parallel to the regional linear.

Grab samples taken within this zone assayed up to 0.63 oz.gold/ton. Five other grab rock samples assayed over 0.10 oz.gold/ton, four of which are associated with quartz veins and the other is pyrite mineralization with no vein material. In addition, proximal to the gold zone, a brecciated stockwork zone carrying up to 24.8% zinc and 0.035 oz.gold/ton was also uncovered on the Kitgold property. Further detailed mapping, rock sampling and geophysics are planned for this fall. (SEE GCNL No.168. 30Aug91. P.2 FOR OTHER PROJECT NEWS)
