ROCK & ROLL DRILLING RESUMES - Murray Pezim, chairman,
reports Eurus Resource

Corp. and 50/50 joint venture partner Thios Resources
Inc. have mobilized a diamond drill to resume drilling
of several targets at the Rock and Roll project located
10 miles north of the SNIP mine in the Iskut River area

of northwest B.C. Previous exploration delineated a
preliminary geological reserve for the volcanogenic
massive sulphide Black Dog deposit of 640,000 tons
grading 0.072 oz.gold/ton, 9.8 oz.silver/ton, 3.08%
zinc, 0.79% lead and 0.64% copper over the 700-meter
strike length drill tested to date.

The current phase of drilling is designed to test
three targets; the first being the southward strike
extent of the Black Dog deposit, some 150 meters along
strike from previous drilling. The second is a
coincident horizontal loop-EM/VLF-EM conductor with an
associated multi-element basal till anomaly. This
target lies about 200 meters east of and trends parallel
to the Black Dog deposit. Both targets trend southward
onto the adjacent Bornagain property of Eurus, 37.5%,
Thios, 37.5% and Consolidated Bel-Air Resources, 25%.
The third target is a coincident airborne EM/IP
chargeability and UTEM conductor north of the Iskut
River, some two km northwest of the Black Dog deposit.
This geophysical target has been traced over a minimum
strike length of 200 meters. (SEE GCNL No.123, 26Jun91,
P.1 FOR PREVIOUS DRILL RESULTS)
