

NEWHAWK GOLD MINES LTD. (NHG-T)
GRANDUC MINES LTD. (GDC-V)

LARGE COPPER INTERSECTIONS AT SULPHURETS - Newhawk Gold Mines Ltd.,

60%, and Granduc Mines Ltd., 40%, received more assays from surface drilling on the Sulphurets property 50 miles north of Stewart, B.C. The two-phase program is continuing with six surface diamond drill holes completed on the Shore zone, one of several high grade gold/silver targets located adjacent to the West zone. Results from 12 holes drilled on bulk tonnage targets show potential for defining a system of copper/gold deposits extending north from Placer Dome's Kerr deposit.

On the Sulphurets gold zone, all five drill holes intersected copper/gold values over significant widths.

HOLE NO.	INTERVAL FEET	LENGTH FEET	COPPER %	GOLD OZ/T	
S91-388	173.5-548.2	374.7	0.42	0.016	The holes at left have tested about 2,000 ft. of strike. Hole S91-391, a step-out hole, was
S91-389	233.3-606.3	373.0	.49	.014	
S91-390	454.4-592.2	137.8	.31	.014	
S91-392	542.9-659.9	117.0*	.43	.020	
S91-391	271.0-677.0	406.0	.10	.020	

* Bottomed in mineralization

 drilled 1,500 feet southwest of S91-390 to test along strike.

At the Snowfield zone, previous drilling and trenching outlined a mineral inventory of some 7,700,000 tons grading 0.075 oz.gold/ton. Two 1991 surface holes, drilled in the inventory area, continue to confirm the evenly distributed and consistent nature of gold mineralization in the zone. Recent surface sampling has expanded the dimensions of this zone which remains open.

S91-393	0.0-653.0	653.0*	-	.056	The 1991 surface holes returned assays
Incl.	273.0-460.0	187.0	-	.092	
S91-394	0.0-312.3	312.3	-	.056	
Incl.	167.0-245.0	78.0	-	.083	

 at left.

At the Mitchell zone, three surface holes have been completed. Two holes reported in GCNL No.157, 15Aug91, P.3, successfully intersected the zone, with the third hole results tabulated below.

S91-395	0.0-787.6	787.6*	.22	.020	In addition, surface sampling expanded this zone, which still remains open.
---------	-----------	--------	-----	------	---

One hole, S91-396, was drilled on the Alder zone, located 1.2 km west of the Mitchell zone. It intersected 483 feet averaging 0.015 oz.gold/ton with negligible copper values. Results are yet to be received for the final hole of the 1991 first phase drilling and no results have been received for second phase drilling.
