**SKYLINE GOLD CORP. (SKX-V)**

SKY CREEK DRILLING STARTS - Murray Pezim, chairman, reports, the start of drilling on the Sky Creek project in the Iskut River area of northwestern B.C. Adrian can earn a 51% interest in the property from Skyline Gold Corp. by spending \$1,600,000 on exploration, issuing 200,000 shares and granting Skyline options to buy 150,000 shares of Adrian at prices varying from \$2.75 to \$4.74 per share over a three-year period. The claims adjoin the Cominco/Prime SNIP mine and Skyline's Johnny Mountain mine property.

The initial drilling target on the Sky Creek property is the SMC zone, a volcanogenic massive sulphide discovery made earlier this year. The first holes will test the zone underneath Trench 02, from which channel sampling has returned 0.119 oz.gold/ton, 1.14 oz.silver/ton, 2.06% lead, 5.15% zinc and 0.23% copper across 54.1 feet. Mechanical and hand trenching has partially exposed the SMC zone which can be traced for a minimum 1,800-metre strike extent. Additional targets to be tested in the immediate vicinity of the SMC Showing are the Tillerman, and Upper Road Showings. (SEE GCNL No.169, 3Sep91, P.1 FOR PREVIOUS INFORMATION)
