WESTERN CANADIAN INVESTA

CONSOLIDATED CARINA RESOURCES CORP. (CCK-V)

MANCHESTER RESOURCES CORP. (MHO.A-Alberta)

ROK RESULTS - Rick Walker, director, Consolidated Carina Resources Corp. and 50/50 joint venture partner Manchester Resources Corp. report the 1991 exploration program on the ROK property has been complete. The porphyry copper/gold prospect is located eight km southeast of Iskut Village on the Stewart-Cassiar Highway in the Kinaskan Lake area.

The 1991 program involved soil geochemical sampling, geophysical surveys, backhoe trenching (18

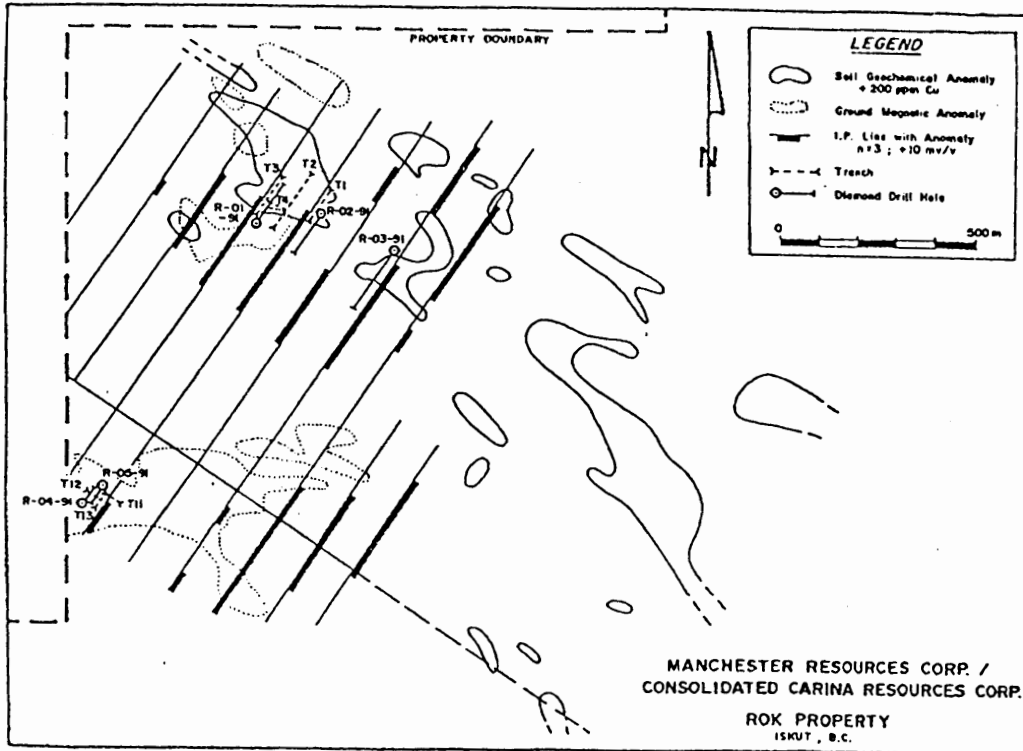

trenches totalling 1,110 lineal metres) and diamond drilling of five holes totalling 716 meters. The induced polarization and soil geochemical surveys outlined several extensive anomalies. Trenching and drilling programs were concentrated within the Main zone and the South zone porphyry targets which both occur near coincident geochemical and IP anomalies. The significant trench sampling results are overleaf Page 1.

Widespread occurrences of chalcopyrite were recently discovered in outcrop over a 200 by 100-meter area northeast of the Main zone, up-slope from an area with anomalous gold and copper values in soils. The mineralization is related to a skarn zone within altered calcereous siltstone and limestone. Also, an 800 by 300-meter zone with chalcopyrite mineralization in float and outcrop has recently been outlined to the east of the South zone. This mineralization is partially coincident with the untested eastern extension of a large IP anomaly.

The areas tested to date lie within an extensive mineralized and altered system in excess of two km across. Interpretation of the distribution of mineral showings, alteration and geophysics suggest that potential exists for a large porphyry copper/gold deposit. Significant drilling results are also overleaf. (SEE GCNL No.155, 13Aug91, P.1 FOR PREVIOUS PROJECT INFORMATION)

ROK PROJECT

SUMMARY OF SIGNIFICANT TRENCH RESULTS				
Trench No.	Significant Interval (m)	Length (m)	Cu (%)	Au (oz/ton)
1	21.0 - 135.0	114.0	0.449	0.011
2	69.0 - 93.0	24.0	0.207	0.006
	121.5 - 157.5	36.0	0.530	0.018
3	27.0 - 57.0	30.0	0.255	0.006
4	0.0 - 6.0	6.0	0.176	0.005
	27.0 - 45.0	18.0	0.203	0.005
11	15.0 - 36.0 (end of trench)	21.0	0.240	0.003
12	0.0 - 25.5 (end of trench)	25.5	0.181	0.003
13	0.0 - 27.0	27.0	0.325	0.006

SUMMARY OF SIGNIFICANT 1991 DRILLING RESULTS				
Drill Hole No.	Significant Interval (m)	Length (m)	Cu (%)	Au (oz/ton)
RO-01-91	33.0 - 47.5	14.5	0.201	0.005
	64.5 - 106.5	42.0	0.312	0.007
	114.0 - 127.0	13.0	1,168 ppm*	57 ppb*
RO-02-91	1.52 - 39.0	37.48	0.154	0.002
	includes 1.52 - 15.0	13.48	0.203	0.002
RO-04-91	39.0 - 93.88 (end of hole)	54.88	855 ppm*	70 ppb*
	includes 45.0 - 51.0	6.0	0.180	0.007
RO-05-91	63.0 - 84.73 (end of hole)	21.73	780 ppm*	31 ppb*
	includes 63.0 - 66.0	3.0	1,350 ppm*	50 ppb*

* Cu values (reported in ppm) and Au (in ppb) are geochemical analyses.
