BRITANNIA GOLD CORP. (BGP-V)

CORE DRILLING UNDERWAY - John W. Greenslade, president AT LEXINGTON PROJECT of Britannia Gold Corp. has reported the first of a planned series of core drill holes on the Vacher Zone at the Lexington property, 10 miles south of Greenwood, B.C. intersected the mineralized zone between 86.5 feet and 116 feet, for a total intersection of 38.5 feet; including 7 feet of heavy sulphide mineralization. This significant intercept supports the previously untested geologic model. The objective of this first diamond drill phase is to develop sufficient information for a larger scale diamond drill program. Core has been split and sent for assaying.

Futher testing of an additional parallel zone to the south of the Vacher Zone is planned to begin within several weeks. This potential parallel zone has returned high grade mineralization in previous drilling.
