JORDEX RESOURCES INC. (JDX-V)

ACHERON RESOURCES LTD. (ACZ-V)

DRILLING PROGRAM CONTINUES - Jordex Resources 55% and Acheron Resources 45% are continuing a core drilling program on the 92 claim Wann Group adjoining the Island Copper mine on northern Vancouver Island, B.C. Eight holes have been completed designed to test for potential porphyry copper-gold mineralization within a strongly altered volcanic-intrusive sequence, similar to that hosting the Island Copper Mine along strike to the east. All holes have intersected strongly altered units, often with pervasive sulphide and magnetite mineralization.

Assays have been received from only two holes with only minor chalcopyrite-bornite. The second hole was lost in faulted ground. A new hole will be drilled to test this area. Chalcopyrite-bornite mineralization has been reported in sections of most holes. Assays are awaited.
