## ALBAN EXPLORATIONS LTD. (ABN-V)

HOLE NO.	INTERVAL FEET	WIDTH FEET	COPPER %	GOLD OZ/T'	Alban Explorations Ltd. has reported
92-11	35.4-104.3	68.9	0.152	-	results of a recent
92-12	147.6-160.8	13.2	.172	-	drill program on the
	324.8-334.6	9.8	-	0.124'	<u>Mt. Milligan area</u>
92-18	44.0-112.9	68.9	.098	-	<u>Mitzi property in</u>

-----' which the company is earning a 50% interest from Hemlo Gold Mines Inc. Placer Dome Inc. is funding the Mitzi program by buying Alban shares and currently owns 10.8% of the total issue.

A total of 835 metres was completed in eight diamond drill holes. Five of these were aimed at further investigating the best intersections from last year's drilling in the Main Grid area. Two holes intersected a previously unknown, potassically altered monzodiorite plug with associated chalcopryrite mineralization. Intersections are shown in table above.

The mineralized monzodiorite plug contains significant magnetite and would generate a discrete magnetic anomaly suggesting good potential for similar and possible larger systems to the west. Previous surveys have identified a number of interesting magnetic anomalies over a large area in this direction and tentative plans for the summer include geophysical, geological and geochemical surveys.
