DELGRATIA DEVELOPMENTS LTD. (DAR-V)

Delgratia Developments has completed a \$264,044 financing via public offering on the V.S.E., and is doing first stage work recommended on the 100% Hillside claim group, located in the Nelson Mining Division of B.C. The Hillside Claim Group consists of 6 Crown Granted mineral claims, one Reverted Crown Granted mineral claim, and 5 located claims. B.C. Ministry of Mines records describe several gold occurrences on the property, including both vein-type prospects (known as the California Mine et al, which operated circa. 1897 to 1947) and wide, gold bearing alteration zones in fractured, pyritized volcanics. Trench and grab sampling on the property has returned values of up to 2.205 oz. gold/t. Recent exploration of adjoining properties suggests a previously unrecognized potential for bulk tonnage, low grade gold-copper deposits.
