WESTERN CANADIAN MINING

**LUCKY 7 EXPLORATION LTD. (LKS-V)**

**OPTION AGREEMENT ANNOUNCED - C. Brett president**

announces the option, from Conkle Lake Mines, of approx. 3 square km (52 units) of ground adjacent to the east of the old Camp McKinney gold mine, 50 miles southeast of Kelowna, B.C. Camp McKinney underground mine produced 81,000 ounces of gold in the early 1990's.

Lucky 7 has sampled and mapped a NE striking structure on the optioned Old England Crown Grant claim, 3km due east from Camp McKinney and has located a 7 foot true width of blue-white milky quartz, structure bounded by faults with strong mariposite alteration, assaying 0.285 oz/ton gold, 0.16 oz/ton silver. A 1.4 foot true width of this structure assayed 1.233 oz/ton gold, 0.58 oz/ton silver. Select samples assay up to 2.747 oz/ton gold, 1.27 oz/ton silver. This previously unexplored structure will be drilled when weather conditions permit.

The company also reports J.W. Murton has joined the board of directors and that directors stock options have been granted to William Luniw and J.W. Murton as to 30,000 shares each, at 25¢ per share for 5 years.
