

SUNTAC MINERALS CORPORATION (SUJ-V)
CANARC RESOURCE CORP. (CCM-V)
REMBRANDT GOLD MINES LTD. (RTG-Alberta)
 NEW CALCULATION INCREASED RESERVES

Vein System	Class.	Cutoff (Oz./T)	Gold Tonnage (Tons)	Grade Gold (Oz./T)	Canarc and Suntac have reported an independent geostatistical study of the Polaris-Taku deposit, 50 miles east of Juneau, Alaska, in
Y Vein	Prob.	0.250	210,000	0.461	
AB Vein	Prob.	.250	78,000	.403	
C Vein	Prob.	.250	45,000	.390	
Total	Prob.	0.250	333,000	0.437	
Y Vein	Poss.	.250	987,000	.469	
AB Vein	Poss.	.250	508,000	.387	
C Vein	Poss.	.250	397,000	.398	
Total	Poss.	.250	1,892,000	.432	
Grand Total		0.250	2,225,000	0.433	

NW B.C. This represents an increase of 7% over the company reserve estimate of 1,920,000 tons grading 0.47 oz/ton or 902,000 ounces of contained gold.

Montgomery Consultants Ltd. of Vancouver, B.C. were commissioned to prepare an independent evaluation of drill indicated, geological gold resources in the AB, C and Y vein systems. Their results are in table above.

Dr. Montgomery concluded that substantial tonnages of ore grade material can be added to the geological resource estimate simply through fill-in drilling.

Within the Y vein system, the cross sections indicate many additional tons of ore grade material may still be left in place. Within the C vein, the tonnage could be more than doubled by extending the estimation blocks from 50 to 100 feet.

The AB, C and Y veins are open-ended systems, considering drilling has located neither the margins nor the bottoms of the main ore shoots. Significant gold reserves could be added through step-out drilling along strike and down dip.

The C vein holds excellent potential for a significant increase in reserves. Thirteen of fifteen drill holes have returned economic grades, exceeding 0.25 oz/t gold over mineable widths, exceeding 5 feet testing a 1,200 foot length and a 1,000 foot depth, open in all directions.

Suntac Minerals holds an option to earn a 60% interest in the Polaris-Taku property from Rembrandt Gold Mines Ltd. by spending \$3,000,000 on development now completed and delivering a feasibility study by Dec. 31, 1994. Canarc Resource holds a controlling 36% interest in Suntac and a controlling 40% equity interest in Rembrandt.
