## BEAU PRE EXPLORATIONS LTD. (BPD-V)

CONCENTRATE SAMPLE ASSAYS - Robert Beaupre, president,

Beau Pre Explorations has reported assay results from concentrates made from trench samples at its Valentine Mountain property on southern Vancouver Island, B.C. Exposure of the "C" system in the "B" zone has been trenched. Using on-site concentrating equipment, two initial samples have been processed and tested. From one ore sample of 44 kg the No.1 sample of 1.15 kg of concentrates assayed 126.41 oz.gold/ton. The second concentrate sample from the 44 kg of ore was the plus fraction which weighted 140.88 grams and assayed 1 gram or 0.035 oz. gold/t. There are no figures for the grade of the ore before concentrating. To date, about 9,000 kg of ore has been stockpiled and is being processed to a concentrate.

Beau Pre filed an application under Section 30 of the Mineral Tenure Act to remove Point Resources Ltd. from the title of the Valentine Group claims allowing assessment work to be filed. Gerald Stang has resigned as director.
